

Examples: Presenting findings on service provision

Private health sector assessments focus on expanding understanding of contributions of the private sector towards priority health needs. A key part of this is quantifying the number and types of private health outlets. Maps can visually demonstrate the reach of private health facilities, by themselves or compared to public facilities.

Concentration of Private Health Facilities in Botswana, 2013

Health Facilities by Sector and Region, Tanzania 2012

Examples: Presenting findings on service provision

Presenting data on private health facilities or cadres of health workers in tabular format is also useful. Often the Ministry of Health keeps registries, but if not, another source for this information may be distributors or social marketing organizations.
